

Tally and Tot-up 1

Tally and Tot-up were two young badgers, born in Durham.

They were always counting things and trying to see who could work things out fastest.

They counted the worms they could find, when they were hunting.

They drove their Mum crazy with their counting!

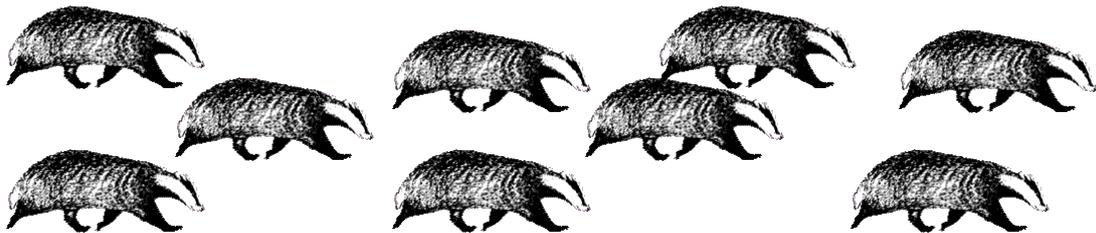

“For goodness sake! Give it a rest!” she’d say, as they tried to add up all the worms they’d eaten that week. All she wanted was to lie down in a bit of peace and quiet.

But still they carried on with their counting and working out.

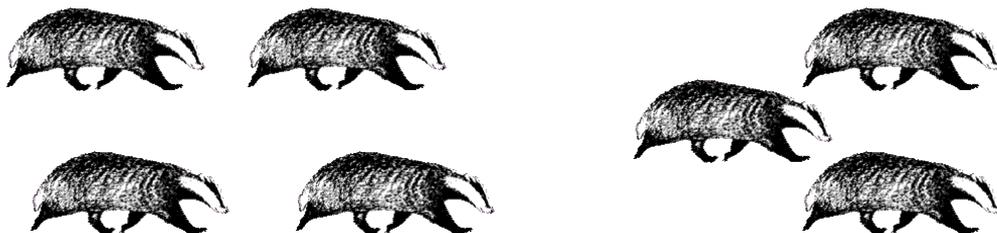

Here are some of the things they worked out. Could you work them out too?

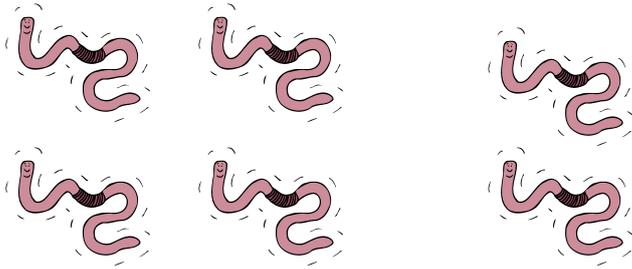

How many badgers can you see?

Here are 4 badgers. If three more badgers came out, how many would that be altogether?

Tot-up wanted to eat 6 worms. But Tally took 2 of them! How many did Tot-up eat?.....

Each badger has 4 paws.

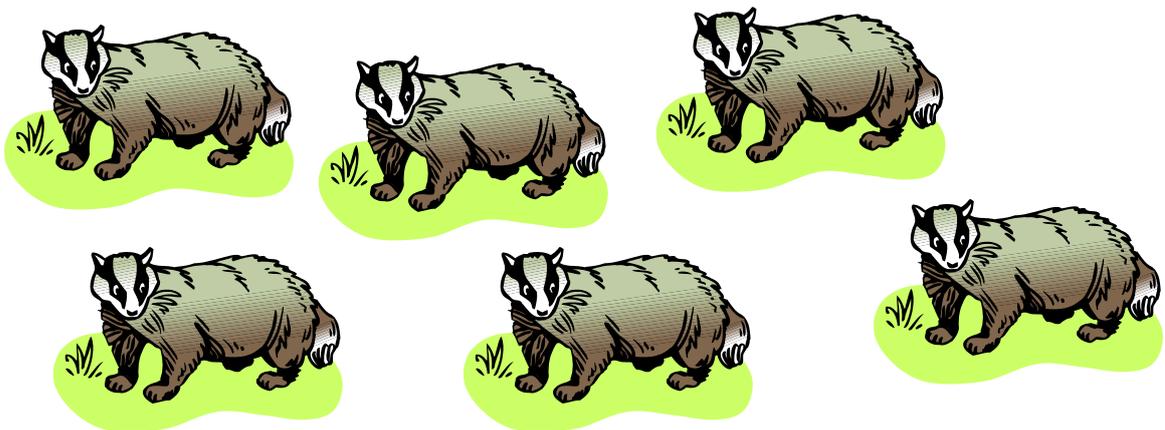

How many paws with 2 badgers have?

How many paws will 3 badgers have?

How many paws will 4 badgers have?

How many toes does each foot have?

How many toes would each badger have on its 4 feet?

How many noses can you see on the badgers above?

How many ears can you see?

How many feet would the badgers have?
