

Badgery Science Fun 3

Some children looked to see around a badger sett. (Without disturbing the badgers, of course!)

They found a number of living things around the sett. They tried to put them into a food chain. Can you put them into the chain. insect green plant badger small bird

What is the mistake they've made in drawing their food chain? **Arrows wrong way.**

What must always come first in any food chain? **Producer**

Why? **Nothing else can use the energy of sunlight to make its own food.**

Can you tick the box that describes the members of the foodchain?

Animal	Producer	Prey	Predator	Both
plant	✓			
insect				✓
bird				✓
badger			✓	

All life fits into a **trohic pyramid** like the one below. You must have lots of organisms in the lower levels to support many fewer organisms in the upper levels. (Ever thought why you see flocks of starlings, but never flocks of kestrels?)

Can you find the names of the pyramid.
Can you put the chain into the
